(54) Title: METHOD OF OPERATING SYSTEMS COMPRISING COMMUNICATION SERVICES

(57) Abstract: A method of operatively handling data systems that include communications services, particularly telephone and data services, wherein a computer system (1) is adapted to execute a service in accordance with a data program and also adapted to process log data, wherein said computer system includes databases (10-12, 13, 14, 18) of which at least one database (13, 14) is caused to contain a predetermined number of transactions of which each transaction has the form of parts of a data program, and wherein said computer/system is caused to fetch one or more transactions from said database or said databases, said transactions together forming a data program for executing said service or said processing function. The invention is characterized in that an interface (20) between an administrative part (2) of the data system (1) and an all-embracing part (15) of the data system, and also an interface between an operative part (3) of the data system and the all-embracing part (15) of the data system wherein said interfaces are mutually the same; in that the all-embracing part (15) has an executing environment such that execution in the all-embracing system and instructions from the all-embracing system to other parts (2, 3) of the data system takes place through the agency of said transaction.
